BravoLT

Senior Software Developer – GoLang

Bravo LT needs you to be a part of our highly motivated group of technology experts. We share a passion for technology and the community we serve, and we are committed to building long-lasting, productive relationships. We focus on giving back to the community, positively impacting society, and providing quality solutions that work. We believe in *autonomy*, *mastery* and *purpose* and in trusting people to do the right thing - and we think Bravo LT is a pretty great place to be a part of.

The Bravo LT Software Developer possesses a deep understanding of the analysis, design, implementation, testing, and maintenance of web applications. A strong foundation in computer science, the object-oriented languages (i.e., Java and C#) and modern technologies are required.

Responsibilities

- Translate business requirements and user stories into functional applications
- Develop scalable back end solutions using GoLang
- Provide expertise in front-end development with Node.js, Angular, React, or Ember, for example
- Work with SQL, stored procedures, functions, and performance tuning
- Execute test-driven development (TDD) practices with developing code
- Work in a team-based, collaborative environment following sound Agile principles
- Design, build, test, and maintain reusable and reliable code
- Ensure the best possible performance, quality, and responsiveness of the applications
- Demonstrate excellent problem-solving skills and critical-thinking skills
- Use a variety of software development tools, programming languages and testing/verification tools, while adhering to development best practices and quality standards
- Ensure proposed applications align with the architectural design and with business needs
- Regularly provide guidance and training to less experienced team members

Basic Qualifications

- Hands on experience with GoLang, RUST, Java, Scala, or Python
- Direct knowledge of programming languages, such as Node.js, Angular, React, or Ember
- Understanding of modern software architecture, such as SOA, SOAP, and REST
- Experience writing or maintaining externally facing APIs (SOAP and/or REST APIs)
- Bachelor's degree or master's degree in Computer Science or related field (desired)
- Three or more years of experience developing software
- Solid understanding of object-oriented software design and related patterns
- Experience with relational databases and SQL
- Strong interpersonal and communication skills and the ability to interact with a diverse group of clients and colleagues at a high degree of professionalism
- Able to manage time effectively
